

DARRAN

WORK EDITION

NEOCON N°17

## HELLO 40

In 2017, DARRAN Furniture reaches a proud milestone - 40 years of providing quality products and service in the contract furniture industry. In 1977, DARRAN was founded by two friends with a humble 12 employees. From there, we have grown to three manufacturing facilities that produce more than 40 furniture collections in North Carolina. Our furniture has changed, but our foundation has not. We have refined and cultivated our trade into who we are today- true to craft.

As we celebrate four decades of success, we are embracing our commitment to delivering innovative designs and solutions for commercial interiors. DARRAN is saying Hello 40 with five new product debuts at NeoCon 2017.

# THINKING QUIETLY

*designed by ThinkingWorks Design Studio*

In a lively setting, ThinkingQuietly's range of acoustic furniture turns the volume down on peripheral sound. The acoustic material is fabricated from compressed recycled plastic. Workstations are available with front privacy panels and a mobile briefcase that can be placed between users. Cable trays utilize the same material to conceal power and data, reducing floor level noise.

Acoustical engineers assisted in the design challenge of reducing noise in the open office by targeting the workstation itself

Desk pads are molded with a non slip backing, providing desktop organization and power

A solid wood Y-frame with LED lights creates an overhead umbrella, trapping sound as it naturally travels upward

The 4-person workstation with an umbrella improves acoustic performance up to 44% over standard stations with screens

## EDGEWORKS

*designed by ThinkingWorks Design Studio*

The collection takes its name from the refined profile of the steel leg. The sharp and unhampered design gives different dimensions and appearances from many angles. A sliding metal frame allows EdgeWorks to expand and contract, adapting to ever changing work environments. Workstations seat up to 6 users with front and side privacy panels. A full line of accessories includes center-mounted paper trays and paper sorters. Suspended wire baskets run cables beneath the surface, allowing for easy wire configuration.

Suspended wire baskets

Touchdown ends are available to add meeting spaces for workstation users

Hollow steel legs can be positioned for inner or outer placement and at various angles to give different dimensional profiles

Choose from a palette of metal finishes

# DIVA

*designed by ThinkingWorks Design Studio*

Go beyond Diva's striking exterior and discover a host of ingenious design elements, each concealed within the solid wood and die cast aluminum frame. Diva was engineered using finite element analysis to create maximum strength using minimum material. Smart powered legs run wires from a hidden plywood undercarriage that easily slides open and closed to connect and conceal. Die cast aluminum feet give Diva "high heels," providing power and eliminating cord clutter. Diva allows tops to span up to 144 inches without the need for a center support leg. Diva meeting tables come in sitting or standing height, and sizes accommodate anywhere from two to twenty-two people comfortably.

A hidden plywood undercarriage slides for easy access while concealing power cords

# BOTA

*designed by Keith Melbourne*

Bota is an ever-growing lounge collection that effortlessly adapts to spaces as a touchdown terminal, brief meeting area, personal focus nook and an overall hub of concourse with integrated power. Viewed from above, the budding Circlet formation resembles a flower, inspiring the collection name. Thin lines, stitched detailing and subtle curves create Bota's design aesthetic. The appearance and function of Bota is enhanced through carefully tailored details in the upholstery. Bota's array of configurations and sizes give the collection a flexible footprint.

The core component is a two-seat "Circler" lounge, available in three inside radii

Bota offers freestanding components, including tables and a coat stand

Bota Shell offers privacy in the middle of lively common spaces. Bota is available in a single double, or triple seat module composed of an upholstered back screen, side screens and an optional roof canopy. Pull up an ottoman to provide an extra seat when collaborating.

# LAMINA

*designed by Keith Melbourne*

Lamina tables are inspired by microscopic plant cell structures - precise in structure while maintaining an organic form.

Table tops are highlighted by a soft cut back edge detail with metal legs.

# DARRAN

DARRAN Furniture is committed to responsible forestry and sustainability in its wood products and print publications. This book was sourced and produced according to the strict standards of the Forest Stewardship Council (FSC) using products that came from well-managed forests.
