

Grove Collection

Product Care & Maintenance

The DARRAN Grove Collection features solid wood tables with a natural live edge. Each Grove table is individually unique with natural characteristics such as grain variations, knots, variations in color, splits, and holes. These characteristics are further enhanced by a protective varnish top coat that provides superior resistance to water marks, heat damage, chemical contact, and scratch resistance.

CLEANING

- › Grove Tables can be cleaned using a soft, damp cloth with a mild soap and wipe dry.
- › DARRAN's protective varnish top coat uses the latest advanced finishing technology to preserve the beauty of each Grove Table. Even with this protection, DARRAN recommends the use of coasters with drinks. Clean up any spilled liquids immediately. Avoid direct contact with hot items, harsh chemicals, and plastic feet on desk accessories as they could damage the finish.

HUMIDITY CONTROL

- › Solid wood will continually contract and expand throughout its life and be sensitive to environmental changes, such as humidity. Humidity levels should always remain between 30% - 50% to preserve Grove tables. Exposure to extreme fluctuations can create additional cracks in the slab, this will not be considered a manufacturer defect. A furniture repair expert can secure a new crack with a wood butterfly and reapply finish to the top.

UV EXPOSURE

- › Avoid placing tables in direct sunlight to prevent wood bleaching and color changes associated with UV exposure.
