

How do I reverse a transaction on Crypto.com? | Technical Support

Once a transaction is confirmed on the blockchain, most of the time it cannot be reversed. * Cryptocurrency transfers are final and irreversible, owing to their nature on the blockchain. * If the transaction is still pending, then go to your account activity page and cancel it. * If you accidentally send to another Crypto.com user, you can ask for the other person send back through email or phone. * Unsupported asset recoveries are limited and may charge fees. * Never send any coins or tokens to the wrong address. They are gone forever. * Please get in touch with the relevant team at our Support Center for help with this.

Reversing a Crypto.com transaction is usually not possible after blockchain confirmation. Cryptocurrency transfers are designed to be irreversible to prevent chargebacks. Pending transactions can sometimes be canceled directly in your transaction history. If sent wrongly within Crypto.com, request a return from the recipient. External sends to wrong addresses often result in lost funds. Crypto.com offers limited recovery for certain unsupported assets, but success isn't guaranteed. Verify details carefully before confirming any transaction.

You generally cannot reverse a completed transaction on Crypto.com because blockchain records are permanent. Once processed, crypto sends are final. Check for pending status to possibly cancel and recover funds.

Internal Crypto.com transfers might be refundable if the receiver cooperates. Wrong network or address sends may be irrecoverable. Some eligible mistaken deposits qualify for Crypto.com's asset recovery tool with possible fees. Always preview and confirm transactions thoroughly to prevent errors requiring reversal attempts.
